

OPUS AUDITORIUM CHAIRS

OPUS FOLD

The Opus series of auditorium chairs, which has been in our collection for many years, has received a new addition **OPUS FOLD**. This folding chair is integrated into a motorised auditorium seating system forming a stepped incline, which can be automatically retracted and packed away to stand by the wall. This means that the auditorium space can be cleared for other purposes. Aesthetically and ergonomically the chair is identical to its prior embodiment, the stackable Opus chair, which is installed into fixed auditorium structures. Thanks to the new movable auditorium model, the Opus family with all its variations offers excellent opportunities for achieving an aesthetically cohesive and functionally optimal architectural entity.

Opus fold seating is easy to install and can be rapidly opened out to provide quality seating for spectators. When the seating is no longer needed, it can be quickly retracted to release space for other uses.

Telescopic seating can be opened out and closed up with a transportable or fixed electrically powered system. The powered systems move the seating by rolling up or unrolling a reliable chain-like linkage that does not damage floors. The systems are normally controlled with a fixed or cabled control panel, but cordless remote controls are also available.

A telescopic solution to Opus Fold chairs is supplied by Kerko Katsomot Oy of Finland which has over 30 years experience of the motorized seating technique, production and installation.

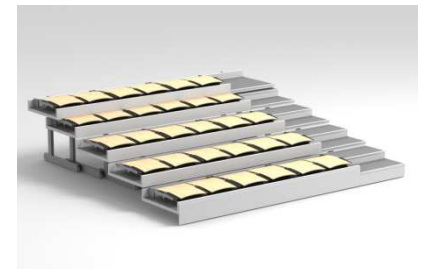

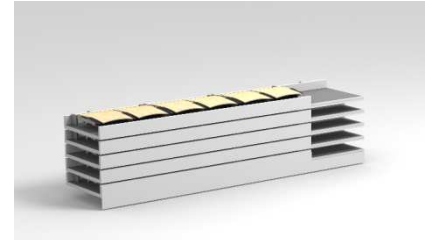

Accessories according to the architect's specifications:

- Rails
- Seat and row numbering
- Acoustics
- Staircase lighting with LED-lights
- Special openings for air conditioning and heating
- The materials of the aisles and stairs from plastic to parquet
